Education

Roehampton University, London — 2.1

Feb 2018 - Dec 2023

BCs Computing Technologies Extended Degree.

Language

Main - Portuguese

Secondary - English

Third - Spanish

Skills

- HTML5
- CSS3
- JavaScript
- JQuery
- Ajax
- PHP
- MySql
- Flutter (Cross Platform)
- Git
- GitHub

Project-1

Gazetteer — *Developed with usage of many API's along with Leaflet.js library*

This project allows us to choose between all countries in the selection menu, where we are then visually directed to that location on the map thanks to Leaflet's geolocation and help from the geonames API, in addition to this feature we also have markings with information about cities, museums, airports, universities as a demonstration of their usage capabilities.

Project-2

Company Directory — *Server manipulation project known as a CRUD.*

CRUD stands for creating, reading, updating, and deleting backend (server-side) data through a front-end (client-side) web application. A system like this allows users to manage their employees, students or any data without much effort and with a more user-friendly and organized design.
